**Press Release Summary: First and only permitted mechanical e-waste recycling and reclamation facility in the State of Kansas...**

Press Release Body: TOPEKA, KS – September 2nd, 2007 – **Asset LifeCycle** has obtained the required permit approval from the **State of Kansas Bureau of Waste Management Division** to operate an **e-waste recycling and reclamation facility in Kansas**. This required permit allows **Asset LifeCycle** to operate in the recycling and reclamation industry within the state of Kansas as the only permitted facility. **Asset LifeCycle** is in the midst of the process with equipment purchases and construction. This is a paramount step in the right direction for the State of Kansas and the Midwest as the first and only permitted mechanical e-waste recycling and reclamation facility in the State. This will allow for a processing capacity on average of 480,000 pounds of equipment in an average 40 hour work week and will significantly reduce the vast amounts of materials being sent to local landfills.

**Electronic Waste ["e-waste"]**  
Any product consisting of any broken or unwanted electrical or electronic appliance. E-waste is a major point of concern considering that many components of such equipment are deemed toxic and are not biodegradable.

**Permits Required**  
All e-waste processing is now subject to permit by the **Kansas Department of Health and Environment (KDHE), Bureau of Waste Management (BWM)**, according to BWM Policy 05-02 (revs'd 3-22-07). E-waste processors that carry out mechanical processes (such as dismantling, crushing, or grinding) and/or chemical processes will be required to obtain solid waste processing facility permits.

**Automated e-waste Processing Plant**  
A grant received in March from the **Department of Health and Environment Bureau of Waste Management** will help finance the first and only Automated Processing Plant. The plant is scheduled to be operational by the end of 2007.
