Industry: [Energy](#)

Global NES of Oregon is a world leader in providing a comprehensive 360 Degree Approach to New Energy Solutions.

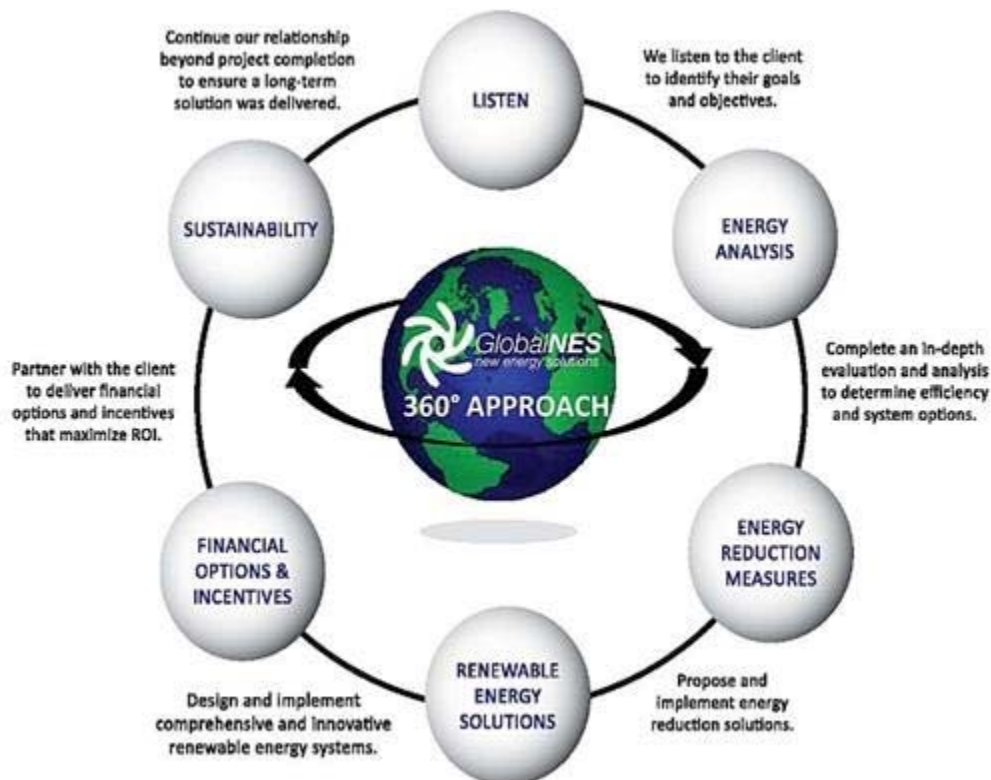

Global NES of Oregon specializes in energy efficiencies methodologies and renewable energy technologies powered by clean sustainable solar, wind, hydroelectric and geothermal energy sources. We partner with businesses, governments and industrial clients to identify, design, finance, and build new energy solutions that deliver energy efficiency and take advantage of today's most innovative renewable energy technologies.

We develop a custom designed system, meeting the energy needs of your company and your community. Renewable Energy solutions deliver long term financial and environmental benefits that are critical for success in today's demanding markets.

## Global NES offers a 360° Approach:

- We listen to our customers in order to fully understand our clients goals and objectives
- We complete an in-depth, state of the art energy evaluation and analysis to determine efficiency, as well as, system options that meet our client's needs
- We propose and implement energy reduction measures reducing overall energy consumption
- We design and build innovative renewable systems that reduce or eliminate energy expense
- We partner with our clients to deliver financial options and incentives that maximize Return on Investment
- We continue our relationship beyond project completion to ensure a long-term, sustainable solution was delivered

## Is Renewable Energy Right For Me?

Renewable energy has a broad-based appeal. The end-line consumer is a homeowner, landlord, retail business owner, farmer, rancher, manufacturer, school, hospital, church, apartment complex owner and virtually anyone who pays a utility bill.

**Your motivation:**

- Supplementing your energy needs or providing 100% of the power for your location or facility
- Renewable energy offers an opportunity to become self-sufficient
- Revenue generation by selling the energy you produce to tenants or back to the utility providers themselves.
- Reduce your carbon footprint on this planet by reducing emissions and use or dependency on fossil fuels.

No matter what your needs or desires are, we have the solutions for you.

**Financing and Incentives**

As part of the Global NES 360 Degree Approach, we work closely with our Clients to ensure the right financing options are presented and utilized, as well as our Clients take advantage of all state and federal incentives. The coordination of financing and incentives are critical in delivering a complete

project and maximizing Return on Investment.

**Financing**

Global NES offers a wide variety of financing options including traditional financing packages, lease options and Power Purchase Agreements (PPA). We have an extensive network of financial relationships and partners specializing in financing and investing in renewable energy solutions. Our network includes financing options from the following sources:

- Traditional Financial Institutions
- Leasing Companies
- Investment Banks
- Hedge Funds
- Insurance Companies
- Private Investors
- Venture Capital Firms

## **Federal and State Incentives**

We work closely with our Clients to identify and present the best financial options. We then work hand in hand with our Clients and financing partners to prepare and complete a financial package that maximizes the opportunity for project completion and delivers maximum Return on Investment for our Clients.

There are currently a growing number of local, state and federal incentives designed to help companies develop and expand renewable energy and energy efficiency solutions. These incentives can dramatically help fund or offset project costs, and include some of the following:

- Government and Private Grants
- Clean Renewable Energy Bonds (CREBS)
- Renewable Energy Production Incentive (REPI)
- Favorable Financing Terms
- Rebates
- Tax Incentives and Deductions

With the complexity and rapidly growing number of incentives, it can be overwhelming and challenging to ensure the right incentives are identified and taken advantage of. Global NES works with corporate Clients to make sure all the local, state and federal incentives are identified and fulfilled. These incentives can play a critical role in defining a project's overall financial outlook, determining cost savings and maximizing Return on Investment.

### **Energy**

### **Efficiency**

As part of the Global NES 360° Approach we utilize state of the art technology to analyze and evaluate building infrastructure, systems and processes. Our expert engineering teams identify, design and implement integrated energy reduction solutions that optimize efficiency and maximize savings.

Global NES begins with an in-depth energy analysis and evaluation focusing on building construction, occupancy patterns, mechanical and electrical systems including HVAC and lighting. We design, present and

coordinate energy reduction measures that improve facility efficiency, reduce operating cost and maximize shareholder value.

**Benefits of Energy Reduction Measures**

- Reduce operating expenses and improve cash flow by dramatically reducing energy/utility consumptions
- Identify and reduce energy waste
- Capitalize on federal tax deductions and other government incentives
- Increase the value of your facility
- Decrease maintenance time and costs
- Secure favorable interest rates and terms through Green Financing Options
- Make a positive contribution to the environment by reducing your carbon foot print and greenhouse gas emissions

Global NES also partners with our Clients to ensure maximum Return on Investment by identifying and coordinating favorable financing options and ensuring Clients take advantage of all possible rebates, grants and tax incentives. Please Feel Free To Contact Us For More Information, Or To Schedule Your Free Energy Analysis.
